DETAILED ACTION

Claim Rejections - 35 USC § 112

1. A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 1 recites the broad recitation a flow guiding system, and the claim also recites a swirler device which is the narrower statement of the range/limitation.

2. For the purpose of this Office action, the claims will be examined as best understood by the examiner.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-8, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Abplanalp et al. (U.S. Patent No. 3,083,917) as best understood by the Examiner.

Abplanalp disclose a dispensing head for a dosing device comprising: a plastic outer component B' with at least one outlet nozzle 27a, an inner component part 23a with a flow channel arrangement 23a/25a, wherein the flow guiding system 24a is placed in front of the outlet nozzle 27a and is an integral part of the outer component B', the annular space 25open the flow path to the flow guiding system 24a (see figure 2), the outer component B' axially acting locking to the inner component part 23a by press fit locking friction between the two components

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Clevenger et al. in view of Abplanalp et al. (U.S. Patent No. 2,989,251) as best understood by the Examiner.

Clevenger teaches all the limitations of the claims except for a flow guiding system. However, Abplanalp et al. discloses a dispensing head with an outer component 6 with a flow guiding system 2/5, and an inner component part 1. Therefore, it would have been obvious to one having ordinary skill in the art to have provided the device of Clevenger et al. with a flow guiding system as suggested by Abplanalp et al. Doing so would provide a way to atomizing material (see column 1, lines 20+).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to show the art with respect to a dispensing head: Vogel et al., Buisson, Lund, and Benoist.
